(54) Title: A HIGH PRESSURE PRESSING DEVICE AND A METHOD

(57) Abstract: The present invention relates to a pressing device and to a method of providing a change of pressure between two pressure states: a low pressure state and a high pressure state of at least 4000 bar, in a pressure vessel of a high pressure isostatic pressing device in which a liquid pressure medium is used for generating the pressure. A first pressure changing means is used for changing the pressure from one of two pressure states to an intermediate pressure state, and a second pressure changing means is used for changing the pressure from the intermediate pressure state to the other one of said two pressure states.
